

Concord Fax Online for Microsoft Exchange 2010

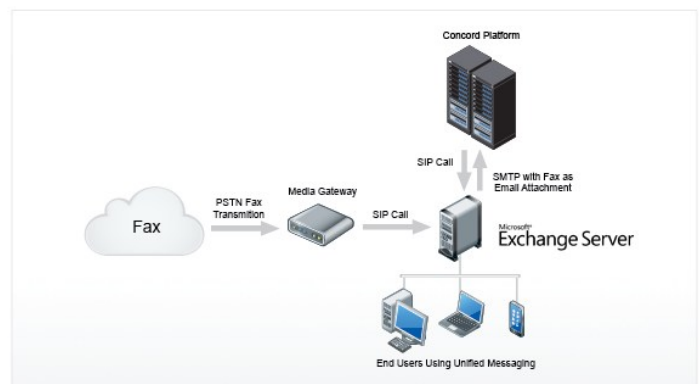

Concord Fax Online provides full support for Microsoft Exchange 2010 in any deployment scenario. Using Media Gateways or SIP Trunks, Concord Fax Online seamlessly integrates with Microsoft Exchange Unified Messaging, regardless of UM being on a customer premised based server or hosted in the cloud. Even customers without the Unified Messaging Role installed can turn their Exchange 2010 investment into a powerful and comprehensive fax solution just with a couple of mouse clicks. No need to install additional software, purchase hardware or licensing and maintenance cost. With Concord Fax Online, you simply pay for what you use.

Microsoft Exchange 2010 comes with everything you need to get going with Concord Fax Online within minutes. A simple user interface allows you to specify a URI for Concord's fully redundant high availability fax network. Then all you need is a Concord Fax Online account and you can start faxing. Concord Fax Online supports all Microsoft Exchange 2010 mail clients including regular Microsoft Outlook, Outlook Web Access and Windows Mobile Outlook.

Fax calls can even be routed through Microsoft Office Communications Server 2007 R2 using uncompressed VoIP (G711) and the Concord Network handling all aspects of the Fax Protocol.

Of course all communications can be secured with TLS.

INTEGRATION HIGHLIGHTS:

- Full Support of Microsoft Exchange 2010 Unified Messaging
- Provides full send and receive capabilities, even without the Microsoft Exchange 2010 UM Role Installed
- Compatible with all other features of Concord Fax Online
- Deployable without Gateways or VoIP infrastructure
