# Print2Fax

The Concord Print2Fax Driver is a utility used with Concord Fax Online Email to Fax (E2F) for sending faxes. This utility converts any printable Windows document to a faxable format with the click of a button. This utility installs as a software application and appears like any printer, so customers can fax ("print") directly from any Windows-printable application to any fax number worldwide. All of this is accomplished as easily as one would print.

An innovative feature of Print2Fax is the ability to combine documents from different applications into a single outgoing fax communication. For example, an architect can now send his/her client the following documents– each with different file formats— for a new kitchen project:

- Kitchen layout (.dwf file)
- Excel spreadsheet with cost estimates (.xls file)
- Brochures from vendors with product specifications (.doc and .pdf files)

These files are combined in one fax communication rather than sending four separate outgoing communications. This same architect would also be able to pick his/her personalized cover page, compose a message, and address the message to a recipient in the user's address book. Optional enforcement of client matter codes or Reference IDs make Print2Fax the perfect choice for cost recovery.

Print2Fax

Concord's Print2Fax utility offers Concord customers far more versatility and options for sending their documents. In addition to faxing the most commonly used file formats, Concord Fax Online can now fax any printable Windows document. Print2Fax, along with other utilities and APIs, can be downloaded from the Account Management Center.

ABOUT CONCORD

What sets Concord apart is revolutionary network architecture which provides real-time failover for both inbound and outbound communications. Real-time failover for inbound communications, a product of significant capital investment, represents a technological breakthrough for the IP fax industry and is unique to Concord. Most IP fax providers and in-house solutions only offer outbound failover, making their networks less reliable. Concord customers enjoy the unique advantage of a robust network which is built for reliability and speed. Security has always been a priority for Concord as well as its customers. For this reason, all communications to and from Concord's fully-secured data centers are encrypted, guaranteeing secure communications which meet the most stringent requirements.

By the same token, Concord's network architecture is flexible enough to accommodate internal corporate policies (features such as specific fax cover pages or file formats) or to ensure compliance with internal and external industry requirements. Concord's secure fax delivery system is fully compliant with the Patriot, Sarbanes-Oxley (SOX) and HIPPA Acts and is a value-added solution for delivering claims, insurance policies, claims, contracts, authorizations, applications, reports, invoices, referrals and other documents. Concord understands the needs of the insurance industry and is positioned to meet the current and future demands of this sector.

Concord's award winning fax services date back more than 15 years.

Since then, Concord has retained a leadership position due to its proprietary technologies which deliver Internet Protocol (IP) fax capabilities with unparalleled reliability, security and speed.

Contact your Concord Account Manager today to learn how Concord can help you save money and improve operations.
